

P-Type Transparent Semiconducting Delafossite CuAlO_{2+x} Thin Film

Filesize: 6 MB

Reviews

This publication is definitely not simple to begin on studying but quite fun to see. It really is full of knowledge and wisdom I am just effortlessly can get a satisfaction of studying a created pdf.

(Alfreda Bradtke)

P-TYPE TRANSPARENT SEMICONDUCTING DELAFOSSITE CUA102+X THIN FILM

Nova Science Publishers Inc. Paperback. Book Condition: new. BRAND NEW, P-Type Transparent Semiconducting Delafossite CUA102+x Thin Film, Arghya N. Banerjee, Kalyan K. Chattopadhyay, Copper based delafossite transparent semiconducting oxide thin films have recently gained tremendous interest in the field of optoelectronic technology, after the discovery of p-type conductivity in a transparent thin film of copper aluminium oxide (CuAlO₂). Most of the well-known and widely used transparent conducting oxide thin films such as ZnO, SnO₂, ITO etc., and their doped versions are n-type material, but corresponding p-type transparent conducting oxides were surprisingly missing for a long time until the fabrication of above-mentioned p-CuAlO₂ thin film have been published (Nature 1997, 389, 939). This has opened up a new field in opto-electronics device technology, the so-called 'Transparent Electronics', where a combination of the two types of transparent conducting oxides in the form of a p-n junction could lead to a 'functional' window, which transmits visible portion of solar radiation yet generates electricity by the absorption of UV part of it. Non-stoichiometric and doped versions of various new types of p-type transparent conducting oxides with improved optical and electrical properties have been synthesised in the last few years in this direction. Wide range of deposition techniques have been adopted to prepare the films. But fabrication of device quality films by cost-effective deposition techniques such as sputtering, chemical vapour deposition, wet-chemical dip-coating technique etc., are the need of the hour for large-scale production of these films for diverse device applications. Here the authors have discussed the fabrication and opto-electrical characterisation of p-CuAlO_{2+x} thin films by cost-effective and scalable deposition routes such as sputtering and wet-chemical dip-coating technique. The authors have also discussed briefly some of the new developments in the field of p-type transparent conducting oxide thin film technology and an up-to-date and comprehensive...
